IN THE CLAIMS

Please amend the claims as follows:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A reservation registration apparatus for performing a reservation registration process of causing an arbitrary reservation subject to be manipulated at a specified starting time, said apparatus comprising:

display ~~controlling means for displaying~~ controller configured to display on a display screen a plurality of reservation subject icons representing said reservation subjects and a time base display area of a calendar for performing said reservation registration, and when said reservation subject icon is moved onto said time base display area, displaying a reservation time display division in a position on said time base display area onto which said reservation subject icon is moved;

controlling ~~means for performing~~ mechanism configured to perform said reservation registration taking a time according to the display position of said reservation time display division on said time base display area as a starting time of the process of said reservation subject;

selection ~~means for receiving~~ mechanism configured to receive input media for said arbitrary reservation subject, said input media having at least one component, said selection ~~means~~ mechanism operating to select and mix formats of said at least one component of said media;

conversion ~~means for appropriately converting~~ mechanism to appropriately convert said formats of said at least one component of said media so that said input media for said arbitrary reservation subject can be properly performed, and

process ~~controlling means for controlling~~ control mechanism to control the

performance of said reservation subject according to said starting time of said reservation

time.

Claim 2 (Original): The reservation registration apparatus according to claim 1

wherein said reservation subject is a program executed by a predetermined information

processing apparatus.

Claim 3 (Currently Amended): The reservation registration apparatus according to

claim 1 wherein said display ~~controlling means~~ controller displays as said reservation time

display division a reservation time frame display division of which a first end is a position

corresponding to said starting time on said time base display area and a second end is a

position corresponding to an arbitrary ending time after said starting time on said time base

display area; and said controlling ~~means~~ mechanism performs said reservation registration of

said starting time and said ending time based on the positions of said first end and the second

end on said time base display area.

Claim 4 (Currently Amended): The reservation registration apparatus according to

claim 3 wherein when said entire reservation time frame display division is moved on said

time base display area, said controlling ~~means~~ mechanism changes said starting time and said

ending time registered for reservation according to a position of said reservation time frame

display division after the movement.

Claim 5 (Currently Amended): The reservation registration apparatus according to

claim 3 wherein when said first end or said second end of the reservation time frame display

division is moved on said time base display area, said controlling ~~means~~ mechanism changes

said starting time or said ending time registered for reservation according to a position of said

first end or said second end after the movement.

Claim 6 (Currently Amended): The reservation registration apparatus according to

claim 3 wherein when said entire reservation time frame display division is moved onto a

trash icon displayed on said display screen, said controlling ~~means~~ mechanism erases the

entire reservation time frame display division and also deletes said reservation registration.

Claim 7 (Currently Amended): A method of reservation registration for performing a

reservation registration process of causing an arbitrary reservation subject to be manipulated

at a specified starting time, said method comprising:

~~a first display step of~~ displaying on a display screen a plurality of reservation subject

icons representing said reservation subjects and a time base display area of a calendar for

performing said reservation registration;

~~a second display step of, when said reservation subject icon is moved onto said time~~

~~base display area,~~ displaying a reservation time display division in a position on said time

base display area onto which said reservation subject icon is moved when said reservation

subject icon is moved onto said time base display area;

~~a registration step of~~ performing said reservation registration taking a time according

to the display position of said reservation time display division on said time base display area

as a starting time of the process of said reservation subject;

receiving input media for said arbitrary reservation subject, where said input media

has at least one component;

selecting and mixing formats of said at least one component of said media;

appropriately converting said formats of said at least one component of said media so that said input media for said arbitrary reservation subject can be properly performed; and

controlling the performance of said reservation subject according to said starting time of said reservation time.

Claim 8 (Original): The method of reservation registration according to claim 7 wherein said reservation subject is a program executed by a predetermined information processing apparatus.

Claim 9 (Currently Amended): The method of reservation registration according to claim 7 wherein said ~~second display step~~ displaying a reservation time display displays as said reservation time display division, a reservation time frame display division of which a first end is a position corresponding to said starting time on said time base display area and a second end is a position corresponding to an arbitrary ending time after said starting time on said time base display area; and said performing said reservation registration ~~step~~ performs said reservation registration of said starting time and said ending time based on the positions of said first end and the second end on said reservation time frame display division.

Claim 10 (Currently Amended): The method of reservation registration according to claim 9 further comprising:

~~a reservation change step of, when said entire time frame display is moved on said time base display area,~~ changing said starting time and said ending time registered for reservation according to a position of said reservation time frame display division after ~~the~~ a movement when said entire time frame display is moved on said time base display area.

5

Claim 11 (Currently Amended): The method of reservation registration according to claim 9 <u>further</u> comprising:

~~a reservation change step of, when said first end or said second end of the reservation time frame display division is moved on said time base display area,~~ changing said starting time or said ending time registered for reservation according to a position of said first end or said second end after ~~the~~ <u>a</u> movement <u>when said first end or said second end of the reservation time frame display division is moved on said time base display area</u>.

Claim 12 (Currently Amended): The method of reservation registration according to claim 9 <u>further</u> comprising:

~~a registration deletion step of, when said entire reservation time frame display division is moved onto a trash icon displayed on said display screen,~~ erasing the reservation time frame display division and also deleting said reservation registration <u>when said entire reservation time frame display division is moved onto a trash icon displayed on said display screen</u>.

Claim 13 (Currently Amended): ~~A program storage medium for causing an information processing apparatus to execute a program, said program comprising~~ <u>A computer readable medium storing computer program instructions which when executed by a computer programmed with the instructions causes the computer to perform the following steps</u>:

~~a first display step of displaying~~ <u>display</u> on a display screen a time base display area for performing a reservation registration process of causing an arbitrary reservation subject to be manipulated and a reservation subject icon representing said reservation subject;

~~a second display step of, when said reservation subject icon is moved onto said time base display area of a calendar, displaying~~ <u>display</u> a reservation time display division in a

position on the time base display area onto which the reservation subject icon is moved <u>when</u>

<u>said reservation subject icon is moved onto said time base display area of a calendar</u>;

~~a registration step of performing~~ <u>perform</u> said reservation registration taking a time

according to the display position of said reservation time display division on said time base

display area as a starting time of the process of said reservation subject;

~~receiving~~ <u>receive</u> input media for said arbitrary reservation subject, where said input

media has at least one component;

~~selecting~~ <u>select</u> and ~~mixing~~ <u>mix</u> formats of said at least one component of said media;

appropriately ~~converting~~ <u>convert</u> said formats of said at least one component of said

media so that said input media for said arbitrary reservation subject can be properly

performed; and

~~controlling~~ <u>control</u> the performance of said reservation subject according to said

starting time of said reservation time.

Claim 14 (Currently Amended): ~~The program storage~~ <u>The computer readable</u>

medium according to claim 13 wherein said reservation subject is a program executed by a

predetermined information processing apparatus.

Claim 15 (Currently Amended): ~~The program storage~~ <u>The computer readable</u>

medium according to claim 13 wherein ~~said second display step~~ <u>displaying a reservation time</u>

<u>display</u> displays as said reservation time display division a reservation time frame display

division of which <u>a</u> first end is a position corresponding to said starting time on said time

base display area and <u>a</u> second end is a position corresponding to an arbitrary ending time

after said starting time on said time base display area; and said <u>performing said reservation</u>

registration ~~step~~ performs said reservation registration of said starting time and said ending

7

time based on the positions of said first end and the second end on said reservation time

frame display division.

Claim 16 (Currently Amended): The ~~program storage~~ computer readable medium

according to claim 15, further comprising:

a registration change step of, when said entire reservation time frame display is

moved on said time base display area, changing said starting time and said ending time

registered for reservation according to a position of said reservation time frame display

division after ~~the~~ a movement when said entire reservation time frame display is moved on

said time base display area.

Claim 17 (Currently Amended): The ~~program storage~~ computer readable medium

according to claim 15 , further comprising:

a registration change step of, when said first end or said second end of the reservation

time frame display division is moved on said time base display area, changing said starting

time or said ending time registered for reservation according to a position of said first end or

said second end after ~~the~~ a movement when said first end or said second end of the

reservation time frame display division is moved on said time base display area.

Claim 18 (Currently Amended): The ~~program storage~~ computer readable medium

according to claim 15, further comprising:

a registration deletion step of, when said entire reservation time frame display

division is moved onto a trash icon displayed on said display screen, erasing the entire

reservation time frame display division and also deleting said reservation registration when

said entire reservation time frame display division is moved onto a trash icon displayed on

said display screen.

Claim 19 (Previously Presented): The reservation registration apparatus of claim 1, wherein said at least one component includes audio.

Claim 20 (Previously Presented): The reservation registration apparatus of claim 1, wherein said at least one component includes video.

Claim 21 (Previously Presented): The reservation registration apparatus of claim 1, wherein said formats of said at least one component includes an analog format.

Claim 22 (Previously Presented): The reservation registration apparatus of claim 1, wherein said formats of said at least one component includes a digital format.

Claim 23 (Previously Presented): The reservation registration apparatus of claim 1, wherein said formats of said at least one component includes an optical format.

Claim 24 (Previously Presented): The reservation registration apparatus of claim 1, wherein said reservation subject plays disc drive.

Claim 25 (Previously Presented): The reservation registration apparatus of claim 1, wherein said reservation subject receives signal from radio.

Claim 26 (New): The reservation registration apparatus according to claim 1 wherein the display control is configured to display a reservation time display division in a pop-up display.

Claim 27 (New): The method of reservation registration according to claim 7 wherein displaying a reservation time display displays the reservation time display division in a pop-up display.

Claim 28 (New): The program storage medium according to claim 13 wherein a wherein displaying a reservation time display displays the reservation time display division in a pop-up display.
